

Information Communication Technology Services

What started out as an in-house development of software platforms that integrate information from multiple databases for the efficient management and seamless execution of our various projects has morphed into a specialised ICT service. Under our specialised ICT service offering, PEC now creates business applications for the general market as well.

IT Re-Engineering ("ITR") was established as a one-stop IT solutions provider for management application, network infrastructure, internet security solutions and communication solutions. Supported by a core team of highly trained software engineers, ITR is able to customise solutions to meet your specific needs as well as to provide efficient back-up and after sales services. To further strengthen our capabilities, we have partnered with Microsoft and HP to ensure that our solutions are supported by the latest and most reliable software and hardware platforms.

PERFORM is ITR's own trademark software application system which caters to the efficient and effective management of human resource, time attendance and payroll. It is a fully

integrated system that can be operated as a stand-alone or via a network. It was awarded the Innovation Development Award by the Singapore Economic & Development Board and the National Computing Board in 1996.

From our base in Singapore, we have successfully extended our services regionally to customers throughout South-East Asia, catering to businesses in varied industries, such as oil & gas, manufacturing, engineering & construction, electronics, logistics & distribution, wholesale & retail, hotels & resorts and financial institutions.
