

Oil & Chemical Terminal Services

With the growth in demand for the storage and distribution of oil-related and chemical products in recent years, the need for efficient and state-of-the-art storage and distribution terminals with berths for ocean going vessels has increased significantly.

To meet this demand and as an extension of our Engineering, Procurement, Construction and Construction Management expertise, we broadened our services into the oil & chemical terminal industry.

With our expertise and experience in the design and construction of storage tanks and vessels (including spherical tanks), berths and their associated vessel handling infrastructures, piping distribution and even state-of-the-art instrumentation and control systems, we have the capabilities to provide end-to-end EPC services for storage and distribution terminals for either dedicated oil and chemical or combined oil and chemical services. Our client base consists of both global and regional oil & chemical terminal operators and we have established a track record in carrying out projects with capacities ranging from 200,000 cbm to over 1,000,000 cbm.

We have been involved with projects in Singapore, Malaysia, Indonesia, Vietnam, China, the UAE, Mozambique and The Netherlands.

To further augment our services, PEC has partnered with CTS BV, a global company that specialises in products used for the storage and transfer of fluids. CTS BV has a strong focus on products such as aluminium geodesic domes, internal floating roofs, primary & secondary tank seals and specialty hoses.

At PEC, we strive to ensure that all your needs are effectively met by us, and also make every effort to guarantee that your project meets your specifications, on time and within budget.
