

Project Works

Value for service is the basis of every business transaction. At PEC we define it as doing what it takes to ensure your project's success. That means delivering projects that meet your requirements in scheduling, cost efficiency, on-going operating performance as well as your health, safety, security and environment commitments.

PEC is one of Singapore's largest and most diverse providers of engineering, procurement, construction or construction management services to the oil & gas, petrochemical, pharmaceutical and oil & chemical terminal industries. For more than two decades, we have worked hand-in-hand with our customers to meet their project objectives and help them to succeed.

We have the experience and expertise in undertaking project works ranging from major equipment replacement to the upgrading of an entire processing unit. We have also been involved in numerous greenfield projects of varying sizes and complexity, not only in the process industry but extending into the oil & chemical terminal industry. We can manage your projects on an EPC or EPCm basis, providing seamless integration between engineering, procurement, construction and construction management activities, all these to ensure the success of your projects. Alternatively, we have the flexibility to provide you with just the project management expertise coupled with either procurement or construction or construction management support to suit your requirements.

Our project works are complemented by our in-house engineering expertise whose disciplines cover process, civil, mechanical,

pipework, electrical & instrumentation and tankage. This enables us to support you in areas of conceptual, front end engineering and detailed designs, using state-of-the-art engineering software.

With our subsidiaries and alliance partners, we are able to further complement our project services to include painting & blasting, insulation, scaffolding and hydro-jetting.

Our holistic approach to project works ensures that we proactively anticipate, identify and resolve potential challenges. We continuously manage and measure compliance with key performance indicators including safety, quality, cost and timely completion. We maintain strong relationships with key suppliers and other service providers who are experts in their own fields. Together with our dedicated fabrication facilities, an extensive fleet of PEC-owned equipment; and our skilled and experience team, we ensure that your projects receive the attention they deserve.

We have currently extended our reach beyond Singapore into Malaysia, Indonesia, Thailand, Vietnam, China, Africa, the Middle East and Europe, demonstrating our capabilities in effectively transferring not only skilled resources, but also the technical and management expertise to various locations.
